Rehabilitation Center

**Early
Developmental
Clinic**

At Joe DiMaggio Children's Health Specialty Center, our early developmental clinic is designed to provide a comprehensive screening for children 3 and younger. The purpose is to identify children at risk for developmental delays and promote access to therapy services if necessary. This program has been funded by the Children's Foundation of Palm Beach County

WHY EARLY INTERVENTION?

Research shows that early intervention can make a significant difference in the child's quality of life as they grow and develop.

OUR TEAM

You and your child will meet with a licensed physical therapist, occupational therapist and speech-language pathologist who will look at your child's fine and gross motor skills, muscle tone and strength, sensory processing, cognitive development, feeding skills, speech and language development.

WHAT'S NEXT?

Specialists will make referrals to services that are needed. Therapists will provide parents with age-appropriate activities and information to help facilitate the achievement of developmental milestones.
